## Electrum partners with RP Global to build one of the largest wind farms in Poland – the Wałcz project (124 MW) is underway

Electrum will deliver the full infrastructure for what will become one of the largest onshore wind farm in Poland. As part of the Wałcz project (124 MW), the company will be responsible for the entire Balance of Plant (BoP) scope — from foundations to grid connection — strengthening its position as a partner for the largest wind investments in the country, following the successful delivery of key infrastructure works at the Potęgowo Wind Farm.

Electrum, a leading Polish integrator of large-scale and technically complex energy projects, has been selected by European developer and IPP RP Global — a company with more than 40 years of experience in implementing renewable energy projects— as the contractor for the key infrastructure scope of the Wałcz Wind Farm.

### **One of the largest wind farms in Poland**

Once operational, the Wałcz project will join the group of the largest onshore wind farms in Poland. At Potęgowo — the largest of these installations — Electrum was responsible for key infrastructure works.

### **Electrum's scope of works (BoP)**

Electrum will be responsible for the full Balance of Plant scope, including:

- construction of foundations for 21 turbines,
- construction of internal and access roads,
- installation of the medium-voltage electrical infrastructure,
- construction of the Grid Connection Point (GPO) substation,
- installation of approx. 35 km of high-voltage underground cable line
- integration of the entire system and preparation for power evacuation.

Completion of works is planned for 2027.

### **Wałcz project – among the largest turbines in Poland**

The investor has selected Nordex N149 turbines, each with a capacity of 5.9 MW and a hub height of 134 meters — among the most powerful onshore turbines installed on the Polish market. A total of 21 units will deliver nearly 124 MW of installed capacity.

## Electrum – experience in Poland's largest wind projects

The Wałcz project joins Electrum's portfolio of the most advanced wind investments in Poland. The company has for years also been developing competencies in operational management of wind energy production, being responsible for servicing and integrating installations with a total capacity close to 2 GW.

*- „The Wałcz project is another example of an investment where we can leverage Electrum's full expertise in constructing large and technically demanding wind farms. We thank RP Global for their trust and for selecting Electrum as a partner for such a significant undertaking. This is an important signal for us, confirming that Electrum is today a partner capable of delivering projects of the greatest scale and complexity, while supporting the growth of renewable energy in Poland,” – says Tomasz Taff, Commercial Director and Board Member of at Electrum.*

The perspective of cooperation is also emphasized by RP Global:

*- “We are pleased to have selected Electrum – a partner with proven experience in Poland's largest wind projects – to deliver the key infrastructure scope of the Wałcz Wind Farm. This is a strategically important investment for the further development of RP Global's portfolio in Poland, and cooperation with Electrum guarantees a high level of quality and safety in execution.” – commented Wojciech Głoćko, Country Manager of RP Global Poland.*

### About Electrum

Electrum Group is a leading Polish Climate Tech company headquartered in Białystok, offering end-to-end solutions based on cutting-edge technologies for the development, construction, and management of energy and information projects. The technological maturity of its experts enables the delivery of products and services that meet the evolving needs of industry and business in an advancing energy transition.

The Group has completed nearly 400 energy facility and installation projects, manages over 3 GW of capacity, and has produced more than 4 GW of energy from wind and photovoltaic farms, making it one of the leaders of the energy transition in the region.

Electrum creates and delivers solutions and projects based on the idea of an individualized energy mix, balancing business social and environmental responsibility with economic efficiency.

More about Electrum can be found on our social media channels on [LinkedIn](#), [Facebooku](#) i [Instagramie](#).
